Backup Power for Home Phone Services during Power Outages

For many years, your home phone would allow you to stay connected to emergency voice services during a power outage. However, many of today's advanced home phone services (including fiber optics) require backup battery power to continue functioning during an outage. To avoid a disruption of home voice service during an outage – and to maintain the ability to connect to 911 emergency services – LTC Networks® provides an uninterrupted power system (UPS) with backup battery for all customers when they are cut over to fiber service. As with all batteries, the battery provided by LTC Networks® has a limited life and will eventually need to be replaced. LTC Networks® offers you the option of purchasing replacement batteries for the UPS once the current batteries reach end of life in order to continue backup power for your home phones.

What Your Battery Can – and Can't – Do for You

The backup batteries provided by LTC Networks® for fiber installations allow you to continue to use your home voice services during a power outage. Without a backup battery or alternate backup source such as a generator, fiber customers will not be able to make any calls, including emergency calls to 911. The only way to maintain the ability to use your phone on fiber is by using some form of backup power.

Our backup battery does not provide power to any services other than voice. Home security systems, medical monitoring devices, Internet access, cordless phones, and other equipment will not run on a home phone backup battery.

Purchase and Replacement Options

If you are concerned about being able to contact 911 emergency services during a power outage, a backup battery may be a good option for you. The battery offered by LTC Networks® is approximately one pound and is roughly the size of two juice boxes.

You can purchase a backup battery directly through LTC Networks®. If you have any questions or simply want to purchase a backup battery through us, please call 1-800-451-2301 for the Princeton business office, 1-800-551-1930 for the Bethany business office, 1-800-551-1940 for the Leon business office, call 777 from your GRM/SCC/LTC phone line, or go to your local business office. Our 8 hour backup batteries cost approximately \$55.25 and can be shipped directly to your house at your cost, or can be picked up in one of our business offices. If you do not feel comfortable installing your own battery, please call us to make an appointment and we would be happy to assist you. However, please note that there may be a charge for this service.

Expected Backup Power Duration

Backup batteries are expected to last at least 8 hours on standby power. The backup battery could give you up to 6 hours of talk time. If you do not feel that is enough time, you may extend your standby power by purchasing additional 8 hour batteries.

Instructions for Proper Care and Use of Your Battery

Please follow the more detailed instructions included with your battery for proper use, storage and care of your battery to ensure that it will function as needed during a power outage. If you do not store your battery correctly, it may shorten its useful life. Environmental factors such as temperature can shorten your battery's useful life. The battery's user manual recommends that you store your battery above -22°F and below 149°F. These batteries are rechargeable. They will not last forever and should be replaced approximately every 4-6 years. When your device starts to make a beeping sound or when indicated by the battery light indicator, that means the battery is depleted and must be replaced. See the instructions above for purchase and replacement options. You should also periodically remove and test your battery to verify both the operation of the backup battery and its condition.
